

click-fix

Repair of damaged bent tubing.

If a cable is damaged, the cable's conduit must be removed; **click fix** will close this gap.
 If access to the cables is required at any time, **click fix** will allow you to build a „tube” as long as needed. **click fix** is WATERTIGHT!

Advantages and applications!

If a cable conduit is damaged, there is no need to cut out the defective core. Simply place the **click-fix** around the damaged tubing and lock it. Done!!!

If a cable is damaged, cut the necessary length of conduit, repair the cable, replace the conduit with **click-fix**, done!

If several meter of conduit are missing, simply use as many **click-fix** sections as necessary and lock in place. Since **click-fix** comes in 1 m sections, it requires minimal space for transport.

Only one person is required to install the system at the site; it's that simple and easy.

If a longer distance requires repair, place one **click-fix** section after the other and lock them.

Important: No additional pipe couplings necessary!

If conduits are damaged, the pipe does not need to be replaced

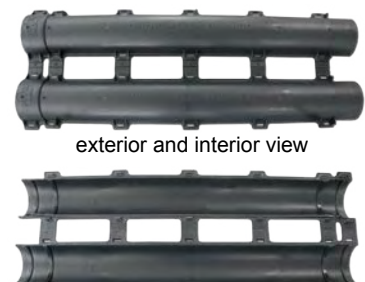

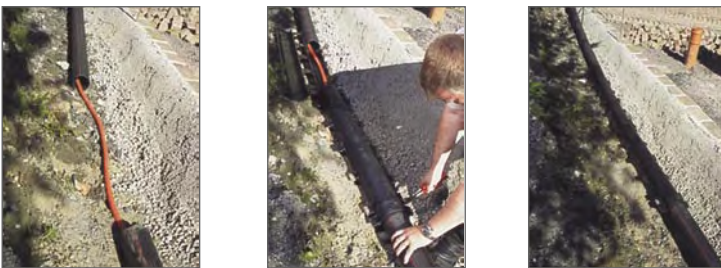

Arbitrary length

Simply place **click-fix** over the existing tube
